
Data box

A data box is basically your electronic communication with the state and all its institutions - for example, the authorities or the courts.

On this website you can find everything about the data box explained in English: <https://chcidatovku.gov.cz/en/datova-schranka>

The best place to set up a data box is at the post office at the so-called Czech points.

If you are not able to set up a data box yourself at a Czech point, contact us and we will arrange a meeting with English-speaking officials.
