

## **To Whom It May Concern,**

We are in the process of creating a consortium with an ambitious goal: applying for a grant under the competition entitled *Call for Proposals on **Advancing the Adoption of Artificial Intelligence in Health*** ([link](#)).

In line with the objectives of this call, we aim to secure funding to establish a community comprising:

- experts with knowledge and experience in deploying AI in clinical settings,
- scientists specializing in data science development, and
- scientists advancing research in medicine, health sciences, public health and life sciences.

The project will create a platform (e.g., a digital space) to facilitate knowledge exchange while precisely identifying local healthcare needs that can be addressed through innovative technological solutions.

Our vision includes fostering an environment conducive to collaborative pilot scientific initiatives. These initiatives will enable leading experts in data science to utilize high-quality health data provided by medical scientists, ultimately driving invaluable scientific discoveries.

All these efforts will form the foundation for developing guidelines, best practices, and validated frameworks **to advance the adoption of artificial intelligence in healthcare**. Additionally, the project will educate various stakeholders, including patients, on the use of AI in medicine while influencing key European policymakers.

We are committed to building a large and diverse consortium to participate in this competition, with the application deadline set for January 2025.

If your institution is interested in joining this exciting EU grant initiative, please contact us as soon as possible!
